

INDUSTRIAL IOT · PREDICTIVE OPERATIONS

AXION INDUSTRIAL

Predict failures before they cost you. Connect any plant, see every signal, and turn it into action — automatically.

01 — THE PROBLEM

Every hour a line goes down, the cost compounds — in scrap, idle labor, missed orders and overtime recovery.

\$260K

Average cost of *one hour* of unplanned downtime on a tier-one line.

23

days of production lost to unplanned stoppages, per plant, per year.

70%

of failures give warning signs the floor never sees in time.

01 — THE PROBLEM

COST COMPOUNDS WITH EVERY MINUTE OF DELAY

Catch a bearing fault at the *whisper* and it is a \$400 part. Catch it at the *scream* and it is a \$260K line stop.

Cost of intervention →

02 — THE PLATFORM

CONNECT. PREDICT. ACT.

01

CONNECT

Drop an Axion edge gateway on the line. It speaks to any PLC, drive or sensor — Modbus, OPC-UA, EtherNet/IP — no rip-and-replace.

02

PREDICT

Edge-AI models learn each asset's normal and flag the anomaly — bearing wear, misalignment, thermal drift — weeks before it stops the line.

03

ACT

A predicted failure writes a work order straight into your CMMS — with the part, the procedure and the window to fix it on your terms.

02 — THE PLATFORM

FROM SIGNAL TO ACTION

One closed loop, measured in minutes — not the weeks a manual inspection round takes.

03 — THE PROOF

WHAT IT RETURNS

Measured over twelve months at a *tier-one automotive supplier* running 38 stamping and weld lines.

-38%

unplanned downtime across the monitored lines.

+22%

overall equipment effectiveness (OEE).

\$14M

in avoided losses per year — a *6-month payback*.

04 — THE ROLLOUT

LIVE IN 12 WEEKS

WEEKS 1-2

CONNECT

Gateways installed on priority lines; data flowing to the Axion edge.

WEEKS 3-5

BASELINE

Models learn each asset's normal signature and alarm thresholds.

WEEKS 6-9

PREDICT

Predictions live; work orders auto-routed into your CMMS.

WEEKS 10-12

SCALE

Roll out plant-wide; handoff to your reliability team.

05 — INVESTMENT

PRICING THAT SCALES WITH YOUR FLOOR

RECOMMENDED		
STARTER Single line, one plant \$3.5K per line / month Edge gateway + sensors Anomaly detection Email & dashboard alerts	GROWTH Multi-line plant \$12K per plant / month Everything in Starter Failure prediction + RUL Auto work-orders to CMMS Reliability success manager	ENTERPRISE Fleet of plants CUSTOM volume & SLA based Everything in Growth On-prem / private cloud SSO, audit & 99.9% SLA Dedicated solutions team

06 — WHY AXION

BUILT FOR THE PLANT FLOOR

Vendor-neutral. Any PLC, any sensor, any CMMS — we sit on top of what you already run.

Edge-first. Inference runs on the line, so prediction survives a network outage.

Proven at scale. Deployed across heavy industry, not a pilot looking for a reference.

240+

plants running Axion today

9M+

assets under live monitoring

14D

median warning before failure

94%

prediction precision on critical assets

LET'S GET STARTED

STOP PAYING FOR DOWNTIME YOU CAN PREDICT

Book a 30-minute scoping call. We'll model your downtime cost and design a 12-week pilot on your most critical line.

APPENDIX — ABOUT

ABOUT AXION INDUSTRIAL

Axion Industrial builds predictive-operations software for manufacturers. We connect the equipment you already run, predict failures at the edge, and turn each prediction into an automated work order — so reliability teams act on the signal instead of the breakdown.

FOUNDED
